

R20 Multi Track Recorder System Software Version History

You can always download the latest system software for free on the web site shown below.

<https://zoomcorp.com/>

Version 3.10

- **Release to fix the following issue in July 2023**

1. When recording with a project that had a bit depth of 24-bit, the recording data could be damaged.

Version 3.00

- **Release to add the following functions and fix the following issues in September 2022**

- **Functions added**

1. Support has been added for the dedicated R20 Control app, which enables control of the R20 from an iPad.
2. A function has been added to format the SD card during startup.
(The SD card can be formatted by pressing the REC button while starting up.)

- **Issues fixed**

1. If the same track was repeatedly recorded over 100 times, recording to that track stopped being possible.
2. Other minor issues were also fixed.

Version 2.40

- **Release to support firmware that accompanied component changes and to fix the following issues in July 2022**

1. If used as an audio interface when in Multitrack mode with DAW Control On while connected to a computer (Windows/Mac), launching the Guitar Lab app would cause the R20 to become inoperable.
2. Switching between the Track View Screen and Level Meter View Screen during recording would cause sound to be recorded momentarily without the Compressor/Limiter/Noise Gate being applied.
3. Pressing the REC key when the Project Name setting screen, which is in the New Project Details, was open would cause proper key operation and sound input to stop being possible.
4. Other minor issues were also fixed.

Version 2.00

- **Released as the bug fixes and function update in March 2022**

Version 1.00

- **Released as mass production in November 2021**
