3. Updating the firmware	3

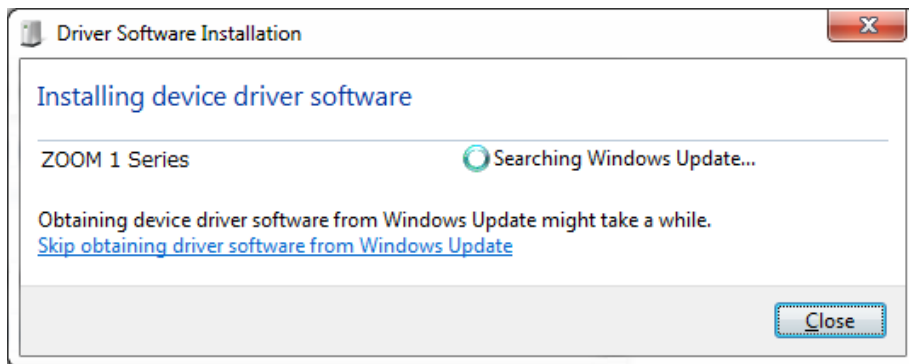

1. Introduction

Thank you very much for downloading the firmware update application for the B1on/B1Xon.

This document uses the B1on for examples to explain how to update the firmware for the B1on and B1Xon.

2. Installing the standard Windows driver on the computer

Connect the B1on to the computer using a USB cable. If you connect to a USB port that is different from the one that you used when installing the Windows standard driver previously, "Driver Software Installation" will appear.

After a short time, the standard driver installation will complete.

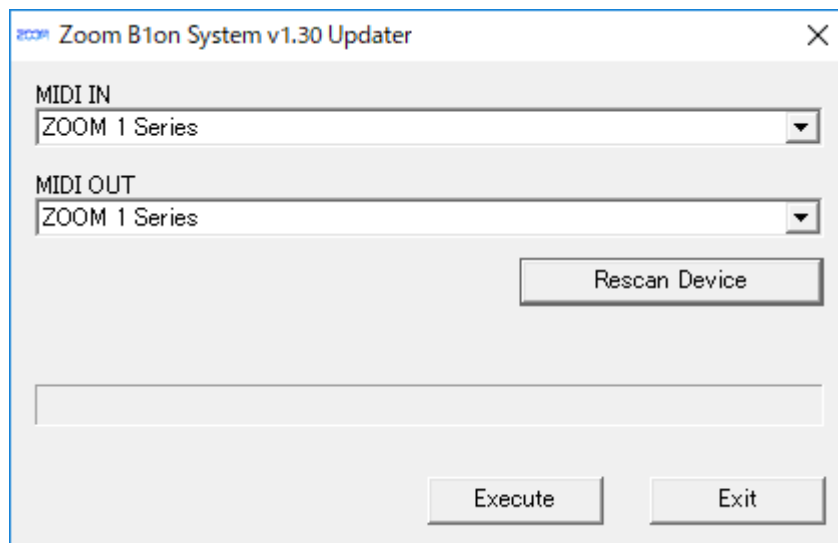

Precautions

- 1) Log in to your computer using an account with administrator privileges.
- 2) Before starting this application, shut down all other applications that are running. In addition, if any MIDI or audio devices are connected by USB cable to the computer you are using, disconnect them all.

3. Updating the firmware

3.1 When the B1on power is OFF, while pressing and holding both the up and down cursor keys, connect its USB port and the computer with a USB cable. This operation puts the B1on into a state ready to receive a firmware update, and its display shows a firmware update standby screen.

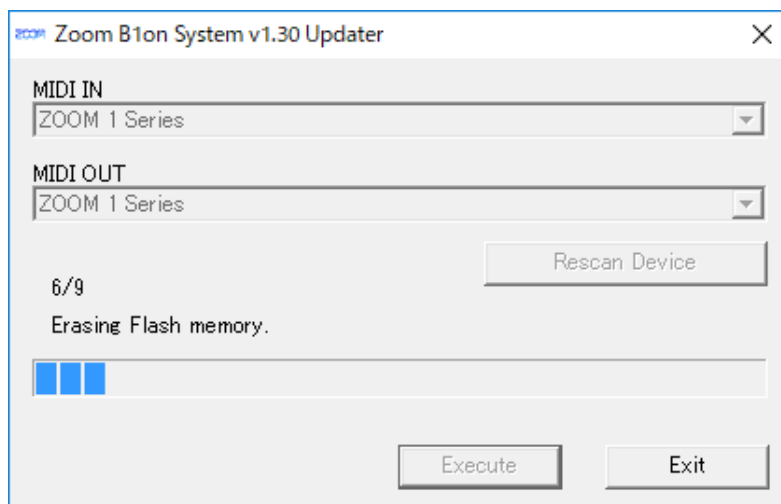

3.2 Double-click the firmware update application icon to launch.

3.3 With a B1on, click the "MIDI IN" and "MIDI OUT" fields to open lists of MIDI devices and select "ZOOM 1 Series" for both.

If nothing is shown in the fields, click [Rescan Device] button.

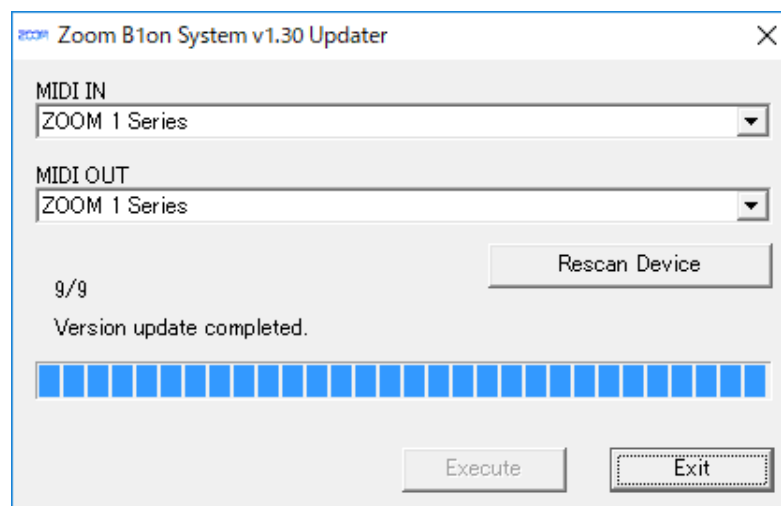

3.4 Click the [Execute] button to start the firmware update. The progress of the firmware update appears as a bar like this.

Do not disconnect the USB cable while the firmware is being updated.

In the unlikely event that a firmware update should fail, follow the procedures from step 3.1 to update the firmware again.

3.5 When the firmware update completes, it will appear as follows.

Click the [Exit] button to close the firmware update application. Then, turn the B1on power off.

This completes the firmware update.
