---

## Version 1.70

- **Release to fix the following issues in October 2026**

1. When using an EXH-6e, the stereo link setting would be reset after restarting.
2. If the line output level setting had been changed, the line output level would not be the same as the setting after restarting the unit.

## Version 1.60

- **Release to add the following function and fix the following issue in April 2026**

- Added function
  1. The TCA-1 timecode adapter is now supported.
- Fixed issues
  1. When a device name was changed using Handy Control & Sync, the change was not saved.

## Version 1.20

- **Release to fix the following issue in October 2025**

1. When an SSH-6e was connected and the mode setting (mono / stereo / MS Raw) was changed, the following issue would occur.
  - The mode setting change would not be applied, and recording would use the same mode as before it was changed.

## Version 1.10

- **Release to fix the following issues in May 2025**

1. Even when fps was set by an UltraSync Blue, it was not applied to the H5studio and proper synchronization was not possible.
2. If data recorded with the Mic track turned off was exported as 2Mix, the file would be silent.
3. When being used as an audio interface, the line output limiter item was missing from the OUTPUT menu.
4. Other minor issues.

## Version 1.02

- **Released as mass production in February 2025**
