

H6studio Handy Recorder System Software Version History

You can always download the latest system software for free on the web site shown below.

<https://zoomcorp.com/>

Version 1.60

- **Release to fix the following issues in October 2026**

1. When using an EXH-6e, the stereo link setting would be reset after restarting.
2. If the line output level setting had been changed, the line output level would not be the same as the setting after restarting the unit.

Version 1.50

- **Release to add the following function and fix the following issues in April 2026**

- Added function
 1. The TCA-1 timecode adapter is now supported.
- Fixed issues
 1. When a device name was changed using Handy Control & Sync, the change was not saved.
 2. When tracks were turned on/off, the phantom power supply of other tracks would sometimes be interrupted.

Version 1.20

- **Release to fix the following issue in October 2025**

1. When an SSH-6e was connected and the mode setting (mono / stereo / MS Raw) was changed, the following issues would occur.
 - The side mic sound would be muted.
 - The mode setting change would not be applied, and recording would use the same mode as before it was changed.

Version 1.10

- **Released as mass production in August 2025**
